

Case Study – M&C Saatchi

Location: London.

Total Contract Value: £25k

Year: 2010

Job type: Multiple AC Installations

Due to the existing central cooling system having numerous faults/repairs identified following a full feasibility study, it was decided by the in-house FM team, for this year we would install some local, stand-alone air conditioning systems to alleviate hot spots within the building and provide cooling to three cellular rooms.

Five separate systems were installed; a small comms room & Kitchen office were fitted with Mitsubishi Heavy wall mounted heat pump units, the media studio was fitted with a 6kw Daikin wall mounted heat pump unit, the remaining Twin AC systems installed on 1st & 2nd floors to give additional cooling to hot spot areas.

A combination of Mitsubishi Heavy & Daikin units were selected due to cost and physical sizes, all systems were commissioned and run up and have achieved what the client requested, localised heating & cooling on demand to supplement the existing systems.

The project was a relatively straightforward job with the exception of the plastered ceilings and the removal of some existing fan coil units to facilitate the new units positions.
